#### 8.2. Exposure controls

#### 8.2.1. Appropriate engineering controls

#### Appropriate engineering controls:

Ensure good ventilation of the work station.

#### 8.2.2. Personal protection equipment

### Personal protective equipment:

In case of inadequate ventilation wear respiratory protection. Gloves. Safety glasses.

#### Personal protective equipment symbol(s):

#### 8.2.2.1. Eye and face protection

#### Eye protection:

In case of splash hazard: safety glasses. Standard EN 166 - Personal eye-protection.

#### 8.2.2.2. Skin protection

#### Skin protection:

Wear suitable protective clothing.

#### Hand protection:

Where hand contact with the product may occur, the use of gloves (approved according to the EN374 standard) made from the following materials may provide suitable chemical protection: . For continuous contact we recommend gloves with breakthrough time of more than 240 minutes with preference for > 480 minutes. For short-term/splash protection we recommend the same, but recognise that suitable gloves offering this level of protection may not be available. In this case a lower breakthrough time may be acceptable as long as appropriate glove maintenance and replacement regimes are rigorously followed. Glove thickness is not a good predictor of glove resistance to a chemical as it is dependent on the exact composition of the glove material. Depending on model and material, glove thickness generally should be greater than 0,35 mm. Suitability and durability of a glove sidependent on usage (= frequency and duration of contact), chemical resistance of glove material, dexterity. Always seek advice from glove suppliers. . Contaminated gloves should be washed and dried thoroughly.

#### 8.2.2.3. Respiratory protection

### **Respiratory protection:**

Wear appropriate breathing apparatus if air renewal not sufficient to maintain dust/vapour under TLV. Recommended: filter type ABEK. Standard EN 14387 - Gas filter(s), combined filter(s) and full face mask - EN 136.
